

# Submitter

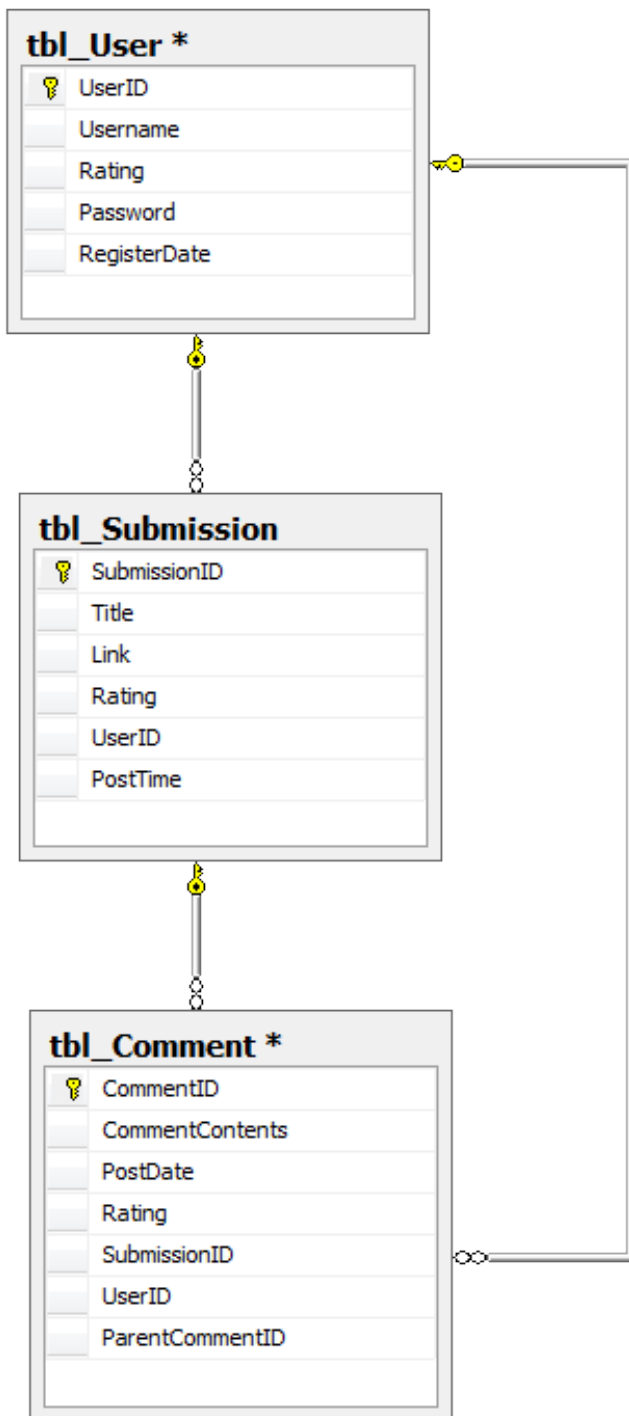

A User Submitted, Content Driven  
Website Built in ASP.Net

# What is submitter?

Submitter is a website where users submit content, view other users content, and comment/rate the content. Submitter is comprised of 3 key objects:

1. Users
2. Submissions
3. Comments

The relationship of these 3 objects can best be shown in a SQL generated diagram.

## Users

Users are the center of Submitter. Users have a one to many relationship with both submissions and comments.

## Submissions

Submissions are where the content is at. They contain a link, (the focal point of the submission) as well as comments, a discussion on the link.

## Comments

Comments have a one to many relationship with submissions. Users can discuss submissions in the comment section.

Now that we get the concept, let's see the site... [Click Me!](#)
